SUMMARY

- Senior Backend Software Engineer with 12+ years of experience designing and scaling distributed backend systems across retail, fintech, telecom, EV, gaming, and e-commerce domains.
- Strong expertise in Java, Spring Boot, Kafka, microservices, scalable APIs, cloud-native systems, and performance optimization.
- Hands-on exposure to AI/LLM-assisted engineering workflows including log summarization, semantic search, observability intelligence, and developer productivity tooling.

CORE SKILLS

- Java, Spring Boot, Distributed Systems, Microservices
- Kafka, Event-Driven Architecture, REST APIs
- AWS, Azure, Kubernetes, Docker
- MongoDB, MySQL, Redis, Elasticsearch
- System Design, Scalability, Performance Optimization
- OpenTelemetry, Grafana, Monitoring & Observability
- AI/LLM Fundamentals, Semantic Search, RAG Concepts

PROFESSIONAL EXPERIENCE

Tesco — SDE3 (2025–Present)

- Working on enterprise-grade Messaging-as-a-Service platform enabling Kafka-based messaging and streaming use cases across multiple Tesco business domains.
- Designed and developed API-first backend services for Kafka topic provisioning, ACL management, user onboarding, quota controls, and access governance.
- Scaled backend services to support ~1M+ events/minute and thousands of topic operations with high availability and low operational overhead.
- Improved platform onboarding efficiency by ~60% through automation of topic creation, user management, and approval workflows.
- Contributed to AI-assisted log summarization and operational debugging workflows using LLM-based approaches for faster RCA and incident analysis.

ChargePoint — Staff Software Engineer (2023–2025)

- Led backend development for License Management System handling licenses for charging ports, stations, enterprise customers, and user entities.
- Built centralized Audit Log Management platform processing millions of operational events/day for compliance, governance, and debugging workflows.
- Designed resilient asynchronous microservices with Kafka-based event processing and fault-tolerant retry mechanisms.
- Reduced API latency by ~35% and improved throughput by ~2x through query optimization, caching, and backend service refactoring.
- Improved operational visibility and reduced debugging effort by ~50% using centralized logging and observability dashboards.
- Collaborated across platform, product, and infrastructure teams to support scalable EV charging operations globally.

Quinbay — Senior Software Engineer (2022–2023)

- Developed scalable search and catalog backend services supporting high-volume e-commerce traffic and product discovery workflows.
- Built Kafka-driven indexing pipelines for near real-time catalog synchronization and product updates across distributed systems.
- Improved search relevance and backend response times, contributing to ~15% increase in user engagement metrics.
- Optimized Elasticsearch queries and backend APIs, reducing search latency by ~30% during peak traffic windows.
- Enhanced platform scalability and deployment reliability using containerized microservices and CI/CD improvements.

Airtel — Senior Backend Engineer (2019–2022)

- Designed and optimized backend APIs supporting millions of telecom and DTH users across recharge, subscription, and account workflows.
- Built scalable high-throughput microservices handling large concurrent traffic loads during peak recharge campaigns.
- Improved system uptime to 99.9% through resiliency enhancements, monitoring automation, and proactive alerting.
- Reduced production incidents by ~40% through performance tuning, observability improvements, and operational stabilization initiatives.
- Worked on distributed backend integrations with payment, CRM, and telecom ecosystem services.

Paytm First Games — Software Engineer (2018–2019)

- Developed real-time event processing systems and geo-fencing services for gaming workflows and user engagement use cases.
- Built scalable backend APIs supporting concurrent gaming traffic and asynchronous event handling.
- Optimized backend workflows to improve event processing latency by ~25% under peak traffic conditions.
- Worked closely with analytics and product teams to improve real-time event visibility and operational insights.

FranConnect — Software Engineer (2014–2018)

- Developed enterprise CRM backend modules and workflow services for franchise management platforms.
- Built and optimized REST APIs for reporting, user management, and operational workflows.
- Improved database query performance and API response times by ~30% through schema optimization and indexing strategies.
- Contributed to scalable enterprise application enhancements used by global franchise customers.

AI & ENGINEERING ENABLEMENT EXPERIENCE

- Hands-on exposure to LLM-assisted engineering workflows for log summarization, incident debugging, and operational intelligence.
- Worked with semantic search and embeddings concepts for engineering productivity use cases and operational knowledge retrieval.
- Basic understanding of Retrieval-Augmented Generation (RAG) approaches using structured operational datasets and logs.
- Familiar with practical considerations around LLM latency, inference cost optimization, hallucination handling, and response quality.

EDUCATION

- B.Tech — Lovely Professional University (2014)
